To Whom It May Concern:

Subject: Stockholm Precision Tools (SPT)

We at IDS have invested in multiple North Seeking Memory combination Telemetry designed Gyros over the last 2 years. We have visited, on multiple occasions, and trained our key field people at the SPT facility in Sweden. SPT field engineers have been on job sites with IDS field people.

IDS is a Directional Drilling and Borehole Survey Service company primarily servicing the surface and underground Mining markets. IDS is a division of a large drilling contractor and we understand complex and targeted drill hole applications and their individual requirements. IDS has worked Worldwide from North and South America to Africa with primary offices in the USA and Canada.

IDS has many years of experience using, including ownership, of a variety of types of Borehole Survey instruments both magnetic and non-magnetic based. IDS prides itself on having a complete "Tool Box" of directional tools and survey options. The SPT NSGyro has an important place in our tool box.

IDS' experience with repeatability and accuracy of the SPT Gyro to date has been excellent. IDS maintains these instruments with utmost care and routine calibrating using the SPT Calibration Stand designed and built by SPT. We take particular care when packaging and shipping these instruments.

SPT, Orlando Rameriz, as an organization has supported us in our markets with expedited service. He also understands and respects our market position and market goals.

For these reasons IDS will continue to do business with SPT as we grow our North Seeking Gyro markets primarily serving Mining clients.
